DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 5,607,599 issued to Ichihara et al. (hereinafter, Ichihara).

Ichihara teaches providing a patterned masking layer over a magnetic layer and the subjecting the exposed magnetic material to a halogen containing plasma. Ichihara teaches that a nonmagnetic compound forms as a result of a reaction between the material of the magnetic layer and the activated halogen gas. Ichihara teaches the magnetic material comprises Co and the plasma may contain a fluorine compound such as CH2F2. See: figures 3-5 and 6a-6g; column 5, line 59; column 11, line 64 – column 12, line 20; column 15, line 66 – column 16, line 20.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/814,257

prior art under 35 U.S.C. 103(a).

Art Unit: 1763

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g)

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ichihara in view of US Patent 6,014,296 issued to Ichihara et al. (hereinafter, "the '296 patent").

The above noted teachings of Ishihara are herein relied upon.

Ichihara does not teach forming a servo pattern.

The '296 patent teaches forming a servo pattern.

It would have been obvious to one skilled in the art to create a servo pattern when making Ichihara's magnetic recording medium because, with a patterned structure similar to that of Ichihara's, the '296 patent teaches that how to make, and the desirability of making such addressing patterns when a disk is manufactured.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ichihara in view of US Patent 6,602,620 issued to Kikitsu et al. (hereinafter, Kikitsu).

The above noted teachings of Ishihara are herein relied upon.

Application/Control Number: 10/814,257

Art Unit: 1763

Ichihara does not teach using a self-organizing block copolymer to form a mask pattern.

Kikitsu teaches using a self-organizing block copolymer to form a mask pattern.

It would have been obvious to one skilled in the art to use a self organizing block copolymer to form a mask when making Ichihara's magnetic recording medium because, Kikitsu teaches that this method of patterning is well suited for forming patterns used to create "islands" of magnetic regions amidst a sea of nonmagnetic areas.

Response to Arguments

Applicant's arguments filed January 31, 2006 have been fully considered but they are not persuasive. Applicant argues that the applied reference etches away the ferromagnetic layer and therefore it does not read upon claim 1. However, the examiner finds nothing in claim 1 that precludes the removal of material as is taught by the reference. The volatile metal halide compounds that are removed by the etching process are nonferromagnetic.

Allowable Subject Matter

Claims 19 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 1763

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Allan Olsen whose telephone number is 571-272-1441. The examiner can normally be reached on M-F 1-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Parviz Hassanzadeh can be reached on 571-272-1435. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
